

ICT3183 – Group Project – Proposal Presentation Guidelines

Please use the following instructions as a guideline to create your proposal presentation slides.

1. Title Slide:

- Project Title
- Course code and course name
- Group project id and Group name
- Group members – TG number and Name with initials
- Supervisor name
- Date

2. Introduction to the client:

- Provide a brief description about the client and clients requirements/need for the software project.

3. Introduction:

- Provide a high-level overview of the proposed software project.

4. Problem Statement:

- Clearly state the client's problem or need that the software project aims to address.
- You can use data or examples to emphasize the significance of the problem.

5. Aim and Objectives:

- Clearly define the aim and the objectives of the software project.
- Highlight the expected outcomes and benefits.

6. Scope of Work:

- Define the scope of the project.
- Specify the features and functionalities that will be included (high level).
- Clearly outline what is included and what is excluded from the project.

7. Methodology:

- Explain the approach or methodology you plan to use in developing the software.
- Provide an overview of the development process, technologies, and tools.

8. Target Audience:

- Identify the target users or audience for the software.

ICT3183 – Group Project – Proposal Presentation Guidelines

- Explain how the project will meet their needs.

9. Project Timeline:

- Present a timeline that outlines key milestones and deadlines.
- Use visual aids like Gantt charts to illustrate the project schedule.

10. Budget:

- Provide a breakdown of the estimated budget for the project.
- Include costs for development, testing, deployment, and any other relevant expenses.

11. Risk Assessment:

- Identify potential risks and challenges associated with the project.
- Propose strategies for mitigating or managing these risks.

12. Team Members and Roles:

- Introduce the key team members involved in the project.
- Outline their roles and responsibilities.

13. Communication and Reporting:

- Explain how communication will be handled within the team and with the client.
- Define reporting mechanisms for project progress.

14. Hardware and Software Requirements for the project:

- Explain the hardware and software requirements for the development of the project.
- Briefly describe what is expected from the client.

15. Testing and Quality Assurance:

- Briefly describe the testing and quality assurance processes that will be implemented.
- Highlight the importance of ensuring a robust and reliable software product.

16. Conclusion:

- Summarize the key points of the presentation.
- Reiterate the benefits and value of the proposed software project.

17. References:

- List down the references.

18. Questions and Answers:
